MassLink[™] with 250 µm Fiber FlexRibbon[™] Technology

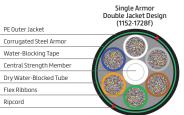

432 to 1728 Fiber Designs

Prysmian

OVERVIEW

MassLink[™] with FlexRibbon[™] Technology provides an ultracompact outside plant cable design that contains up to 1728 bend insensitive fibers. By using FlexRibbon technology, ribbons are rolled up and packed together in small diameter sub units. While FlexRibbon[™] provides high packing density, these 250 µm fiber ribbons still provide the advantages of mass fusion splicing.

FEATURES AND BENEFITS

Ultra Compact Design

- FlexRibbons[™] are rolled up into compact 72 to 288 fiber sub units for easier routing
- Significantly smaller diameter and lighter weight cables allow for easier installation and the use of smaller ducts
- With as much as 21% smaller diameter (38% volume reduction) over traditional ribbon designs, maximizing duct space utilization

FlexRibbon Technology

- Extremely flexible ribbons can be rolled up for high packing densities or laid flat for ribbon splicing
- 12 fiber ribbons are compatible with mass fusion heat strippers, cleavers, and splice machines
- Uses standard 250 um coated bend-insensitive fiber (ITU G657.A1)

Prysmian

Performance

- Uses full dry water blocking technology in the tubes and cable core for easy closure preparation and termination
- Tested in accordance with GR 20/ICEA 640 and with relevant EIA/TIA-455 series FOTPs for fiber optic cables

Registered Supplier

ISO 9001, ISO 14001, TL 9000, and OHSAS 18001
