Prysmian Downhole Technology (PDT)
Protectors

Exploration & Production - Hang Off Protector

Specialty: Hang Off Protector

Protectors are designed to ensure that all control lines and cables are protected for the full length of the production string, thus reducing the risk of damage to cable, control line, or flatpacks. PDT's Protector portfolio includes clamping and cable protection solutions to protect cables from lateral, axial, and rotational loading in downhole applications. In addition to our standard cross-coupling range, PDT designs application specific solutions for demanding situations.

Application

The hang off protector is a light weight design that temporarily protects lines above the rotary during a stoppage in work. The hang off protector secures the lines against production tubing/casing in open hole areas that pipe is being reciprocated and ensures lines are in proper orientation prior to termination at tubing hanger.

Standards & Approvals

All parts comply with NACE Standard MR0175 / ISO 15156

Quality & Testing

- Manufactured in accordance with standard Inspection and Quality Plans
- Factory Acceptance Testing
  - Visual Inspection
  - Make Up / Fit Test
  - Dimensional Inspection
  - Gap Verification
  - Torque Test

Design & Construction

- Aluminum Material
- Light weight
- No loose parts
- Interlocking Straps
- Chamfered ends to prevent hang up
- Channeled inserts to assure no crimping or damaging lines while holding static
- Quick and Easy to install
- Designed for multiple uses
- Custom designs to meet application

Materials

- Aluminum
- Rolled Steel Straps

Common Tubing Sizes

- 2-3/8"
- 2-7/8"
- 3-1/2"
- 4-1/2"
- 5"
- 5-1/2"
- 6"
- 6-5/8"
- 7"
